# Security is about Minimizing Risks

Threats to the security of your operations. It's not a question of "if", but a matter of "when". caliberIT is committed to helping protect your business. We can look at your organization from top to bottom...or concentrate on specific security areas of concern to you.

Our unique approach to protection starts with a simple question: What's missing? To answer this, caliberIT Inc. will perform a FREE SECURITY ASSESSMENT of both your physical and virtual data security. The assessment takes approximately 30 minutes so call us for more information or to request the free assessment.

Firewalls...Viruses...Hackers...Patches....We help you identify the gaps in your security equipment, plans and procedures. caliberIT Security Services supports your overall business goals and integrates all levels of your organization for a complete protection plan. Once the security gaps are identified then what?

caliberIT Inc. has the technology and service expertise that can help protect the information that keeps you in business. We work to develop a fortified cyber defence perimeter around and within your organization.

Our full set of security solutions do more than protect your network, they protect your entire business. We help you manage risk and minimize vulnerabilities across the entire enterprise.

Contact us and see what we have to offer.
